

Staxyz — brand brief

A premium peptide, GLP-1 and hormone dose tracker for iOS. The app is built and near launch; the **name changed from PinWise to Staxyz** and the artwork has not caught up. That is the job.

1 · What we are

Product	iOS app (SwiftUI, shipping soon). Android planned later.
Category	Self-directed peptide / GLP-1 and hormone protocol tracking.
Promise	"The source of truth for peptides and dose tracking."
Model	21-day free trial, then \$7.99/mo or \$50.40/yr. Hard paywall.
Stage	Pre-launch. No App Store listing yet — so brand can still lead.

2 · The name

Staxyz — a play on "Stack Wise" / "Stack Easy". A "stack" is the community's word for the set of compounds someone runs. It should read as competent and calm, not clinical and not bro-science. Pronounced "stack-eez". Previous name PinWise is retired; its "PW" monogram has no Staxyz equivalent, which is precisely why we need a new mark rather than a redraw.

3 · Who it's for

- **Primary:** adults already running peptide / GLP-1 or hormone protocols who currently track in Notes, spreadsheets, or nothing. Detail-oriented, research-literate, privacy-sensitive.
- **Emotional job:** confidence that the dose was right and actually logged. Reduce the low-grade anxiety of self-administered protocols.
- **Not:** bodybuilding culture, hustle aesthetics, or anything that looks like a supplement ad.

4 · Positioning and differentiation

- **Reference feel:** Apple Health × Spotify × Instagram. Premium-minimal, one hero per screen.
- **Differentiators:** real dose math (reconstitution, titration ladders, unit conversion) rather than a reminder checklist; a 57-compound reference library written in-house; a region-precise injection-site map; vial and lot / COA records; on-device data with export.
- **Competitive set:** generic med-reminder apps (Medisafe), spreadsheets and Notes, community forums (Reddit), and coaching / telehealth dashboards. None of them own "the serious tracker" position, which is the gap we want the identity to claim.

5 · The visual system already exists — please build on it

This is the most important constraint. The app's design system is finished and shipping; an identity that ignores it means rebuilding 43 screens. Treat these as fixed inputs.

Token	Dark (primary)	Light	Role
Ground	#000000	#F4F6FC	Pure black is the signature surface
Accent	#E9C9D6	#A02455	Metallic pale rose — the one brand colour
Chrome pair	#F2E7EB → #DCDCE2	—	Metallic gradient for the mark
Primary CTA	#FFFFFF	#0B0D16	Deliberately neutral, never the accent
Text	#FFFFFF / #A0A0A8	#0B0D16 / #5A6478	Primary / secondary

Retired on purpose: royal blue **#2536E6**. A large saturated fill read as a template. Please don't reintroduce a loud primary. Also note the accent is *light on dark*, so ink on an accent fill is near-black, never white.

6 · What we actually need delivered

Mapped to the Premium package. The starred items are iOS-specific and are the ones that unblock our launch — please confirm they're included.

- ★ **App icon, 1024×1024, in three appearances** — Light, Dark and Tinted. iOS 18+ renders all three; a single flat icon is not enough. Tinted must survive being reduced to a monochrome mask.
- ★ **Launch assets** — wordmark and icon tile, designed to sit on pure black.
- ★ **Onboarding hero illustration** — currently a vials image carrying the old wordmark.
- ★ **Vector source files** — SVG or PDF, not just PNG. We regenerate raster sizes ourselves.
- Primary logo, plus a horizontal lockup and a standalone monogram for small sizes.
- Brand guidelines, logo usage rules, colour palette, typography, imagery direction.
- Social kit (avatar + covers) for X, Instagram and TikTok. Handles will change from @PinWiseApp.
- Business card / stationery. 3D mockups are nice-to-have, not load-bearing.

7 · Guardrails

- **No medical claims and no clinical costume.** We are a tracker, not a provider. Avoid crosses, caducei, prescription-pad and lab-coat cues — they invite App Store scrutiny and imply advice we don't give.
- Avoid needle-forward imagery as the primary mark. Fine inside the app; wrong as the icon on a home screen.
- Must stay legible at 40px and in monochrome.
- Type must handle numerals well — the app is full of doses, units and dates.

8 · What we want from this call

- Can you work *from* our existing palette and dark-first system, or do you propose replacing it? (We need the former.)
- Are the three iOS icon appearances and vector source files included in the \$480 Premium tier?
- Is the "2-day delivery" from brief to first concepts, or to final files?
- How do the 3 logo concepts and "unlimited revisions" actually work — revisions on one chosen concept?
- Who owns the copyright and source files on delivery, and is that assignment in writing?
- Will the competitive analysis be original research, or a summary of what we supply?
- What do you need from us to start today?
